## RESEARCH EXPERIENCE

**Condition Based Monitoring of Air Compressors and Motors using Acoustic Data**

**Summer 2012**

*Mentor: Dr. Nishchal K. Verma*

*R&D Project, IIT Kanpur*

A Smart Phone application, to learn different fault states of an industrial air compressor, was developed. The application was tested to recognize the fault state in real time as the air compressor was running. It has performed very well with classification accuracies above 93.73%. It is believed that similar application and model with some minor changes in specifications can be used for acoustic pattern recognition in wide range of fields; especially in industry.

## Feature Level Analysis

Winter 2012

Mentor: Dr. Nishchal K. Verma

R&D Project, IIT Kanpur

A case study of acoustic and vibrational features from different working states of an air compressor was undertaken and were graphically analyzed to derive the best feature set. We built an SVM model based upon these features and got comparable results to the standard PCA based SVM model.

## MTBA: Matlab Toolbox for Biclustering Analysis

Summer 2013

Mentor: Dr. Nishchal K. Verma

R&D Project, IIT Kanpur

A new Matlab toolbox, MTBA, designed to perform a variety of biclustering algorithms under a common user interface while providing additional facilities for data preprocessing, visualization, and validation, was developed. This allows the user to compare biclustering results from different algorithms and choose the approach that best fits their particular scenario.

MTBA is freely available at <http://home.iitk.ac.in/~jayeshkg/mtba/> and [bitbucket](#).

## Comparison of Biclustering Algorithms

Ongoing

Mentor: Dr. Nishchal K. Verma

R&D Project, IIT Kanpur

Major biclustering algorithms are being surveyed, using the toolbox developed during summers to find their specific advantages and disadvantages for their usage in different datasets.
